

UNREAL SPOT CARE ENCAPSULATION

This GENERAL SPOTTER- Most competitive spot removers contain ingredients that require the carpet to be water rinsed or extracted after spot or stain removal. If they are not rinsed the residue will immediately begin to attract soil. This GENERAL SPOTTER should not be rinsed so that encapsulation of the spot residue can be vacuumed away and the soil repelling properties will continue to work. This product is effective on both water and petroleum based spots and spills.

Complies with carpet manufacturer's guidelines for "Wet Side" cleaning.

DIRECTIONS:

- 1) Scrape any crusted material and vacuum.
- 2) Spray a liberal amount of product on the spot and allow 1-2 minutes for product to dwell. (Do Not Overwet)
- 3) Agitate the spot with a blunt object or tamp with a soft brush to break up any crusted material. Work from the outer edge to the center of the spot. Blot with clean towel. Do not rub, as this may cause the spot to spread further or distort carpet fiber. Residue from spot should be absorbed on to towel material. (If spot does not transfer into cloth, consult with your carpet care representative).
- 4) Do not rinse.

**As with all cleaning products, always check for colorfastness on carpeting and upholstery in an inconspicuous area before using these products.*
