

18" Scrubber Adjustment Handle Setting Instructions

Condition	Method of Adjusting handle	Condition Explanation
1		<p>To set for the proper floor condition You will need to adjust the red knob to increase or decrease the amount of pad pressure . To loosen the red knob for adjustments, there is a jam nut located below the Red knob that needs to be loosened to allow the Red knob to turn. Use a 17mm Spanner wrench.</p> <p>After proper pressure has been set ,tighten the jam nut so the red Knob will not move during operation.</p>
2		<p>For VCT tile and smooth floors you can turn the knob for increased pad pressure if needed. The more pressure there is the harder the scrubber will push.</p> <p>Do not use the heavy setting for Rubberized flooring or non slip surfaces as this will overload the brush motor.</p>
3		<p>For Rubberized flooring, non Slip surfaces and rough Floors. Please Adjust to a Lighter pad pressure setting.</p>
